

Cable Grip Holdirex

Secures and releases cables without effort

Ergonomic benefit

- + Grouping around in an uncomfortable position under desk is reduced thanks to easy and quick securing and release of cables: no opening and closing or loops – cables are simply pressed between loops, not inside them

Other benefits

- + 7 interspaces for cables
- + Holdirex Cable Grips are safer to use under height-adjustable desks than usual Cable Holders. If cables are tightened accidentally too much they come loose and fall down much easier from between loops of Holdirex Cable Grips while usual cable holders hold cables inside loops of usual Cable Holders. In the said way Holdirex Cable Grips decreases breakage risks of cable ends (like USB ends) and devices (like USB ports).
- + Loops are easily detachable to provide space for bigger cable bundles or hoses
- + They can be fixed under desks, on ceilings and walls – for both horizontally and vertically running cables
- + Two alternatives for fixing:
 - o 4 screws for heavier loads
 - o or 2 screws at Cable Grip ends for lighter loads – 50% less fixing work!
- + Stylish rounded-shape design

Stylish HOLDIREX with 7 interspaces for cables.

Cables are simply pressed between the loops, not inside them.

Holdirex attached under a desk.

Environment-friendliness

+ All-recyclable: The whole product (loops and frame) is of the same plastic so recycling is easy without need to assort loops and frames into two categories. The product may be safely used as fuel

+ Holdirex is not dangerous to the environment. It can safely be landfilled as no leachate is generated. Compatible with many EU-directives like 2002/95/EC (RoHS)

Fire safety

+ The product burns but it is not classified as flammable. When burning, the product does not release any halogens that could form hazardous gases.

Hint of use

+ Holdirex is well-suited to be used in conjunction with Cable Basket Caba, where heavier objects, such as junction boxes and transformers, can be placed.
